Fund Manager Comments

During the month, the Fund outperformed the S&P BSE Midcap index aided by strong gains, in a weak market environment for mid and small cap stocks, in PVR (strong box office collections), L&T Tech (weakening rupee), Honeywell India (reversal of recent underperformance), DCB (strong results) and Ramco Cements (expectations of good results).

News flow on the macro front disappointed. With services activity hitting its lowest since last September and growth of manufacturing production also softening to a seven month low, the seasonally adjusted Nikkei India Composite PMI Output Index fell to 51.7 in April from 52.7 in the previous month. Industrial Production for February also came in behind expectations, falling 1.1% sequentially following a 0.4% mom drop in January. Auto sales continued to disappoint, registering significant yoy declines across categories in April on demand deferment around elections, high base effect and slowing rural demand. Inflation at 2.9% yoy, was slightly above expectations in March, but remained well below RBI's target of 4%. GST collection in April however stood out, rising 10% yoy and hitting INR 1.13 trn, the highest ever since the implementation of GST in mid 2017.

The Rupee fell 0.6% mom in April, as foreign portfolio flows slowed and oil strengthened. Trade deficit for March hit USD 10.9 bn, rising 13.5% mom from a 17 month low in February, led by a 31% yoy jump in gold imports.

Polling for the 543 Parliamentary seats spread over 36 States and Union Territories is currently underway. Voter turn out has been encouraging, similar to the 2014 highs, registering an average of 67% in the first four phases. Last phase of voting is scheduled to end on 19 May with counting of votes set for 23 May.

March quarter result season is currently more than half way through and has presented a mixed picture thus far. IT, private banks and cement companies have generally reported strong results while consumer staples and auto companies disappointed.

Indian equities paused for breath during the month following an extremely strong performance in March. We remain positive on the medium to long term prospects of the Indian economy and market. The fund portfolio is currently trading at 19.3x March 2021 internally estimated earnings, with an average RoE of 13.9% and an average estimated annual earnings growth of 20.4% over the next 2 years.
